Bridges to Markets

INDEXbridge

Datasheet, Version 1.0 May 2011

*Makes the contents of CAD drawings
searchable.*

MAKES CAD DRAWINGS SEARCHABLE

INDEXbridge helps the CAD users finding their drawings in a more effective and intuitive way.

CAD users tend to work on a large amount of drawings at the same time within an engineering project. They reduce their design time significantly by re-using components, which they and their colleagues have created in the past.

The standard search methods given in EMC² Documentum already are a big help to the user. However, searching for components/content within the drawing itself is not a part of it. This is where INDEXbridge comes to play.

With INDEXbridge, users can search for text within drawings stored in Documentum. I.e. if they are looking for a pump or valve they have used before, they just need to type in the equipment number and INDEXbridge will return the list of the drawings containing the requested component.

INDEXbridge is seamlessly integrated within the Document Webtop Search component and therefore, supports its entire possibilities, allowing the users to perform complex requests, such as looking for all the published drawings containing specific equipment and belonging to a specific project, for example.

Business Benefits

INDEXbridge delivers the following benefits to your business:

- » Reduce time to search for existing components in the drawings and as a result reduce design and construction errors
- » Save time and effort in producing drawings for secure and reliable distribution and exchange
- » INDEXbridge is easily installed and configured saving investment in services

Technical Features

INDEXbridge functionality includes:

- » Searching text contained in CAD drawings using Documentum's Full Text Search Engine
- » Connecting to an unlimited amount of Docbases for indexed search
- » Complex and combined search requests
- » It runs in batch on a (virtual) machine with load-balancing capabilities
